

Round Boat Rego Instructions

Thank you for your purchase. Before getting started please unroll & lay flat your stickers on a table for an hour or so and make sure the surface you will be sticking these onto is clean from fuel, grime, saltwater, soapy water etc.

The stickers are 3 pieces attached as one.

1. The top layer is the application tape that holds your stickers together.
2. The backing sheet is at the back of the stickers and protects the adhesive.
3. The actual sticker you will be sticking is in the middle.

Once you have cleaned the surface from grease, oils, polish, wax etc wash the surface with warm soapy water then rinse with water only and dry. Wait a few minutes until the surface temperature settles then commence the installation process. If you don't have an applicator you can use a credit card to apply these to your surface.

Before you get started do a masking tape test by applying some masking tape to the surface and see if the tape sticks otherwise clean again.

Application Instructions - Pls use dry method only.

1. Apply these carefully onto your boat by applying masking tape along the top edge. I would suggest applying a few layers of masking tape making sure the sticker does not fall off.

2. Lift sticker up and remove the backing sheet carefully. Make sure the sticker does not touch the surface as you remove the backing sheet.

3. Once you peel back the backing sheet slowly wiggle off from the boat and sticker and make sure the sticker does not touch the surface holding it with one hand.

4. Hold sticker up with one hand and apply the sticker working from the masking tape end downwards with the applicator and slowly apply in place with the applicator.

5. Your sticker should now be applied onto your surface. Remove the masking tape you have on the top then slowly peel the clear application tape which will reveal the sticker.

Any small bubbles will air out automatically with the sun. DO NOT prick holes in the air bubble.

Do not apply stickers using a wet method. Stickers must be applied using the above dry method only.

Peel back from here and remove carefully

Backing Sheet
